

AEGIS-14C: Operational Feature & Interface Guide

A concise tabular map detailing all controls, buttons, and automated modules inside the workspace.

1. Navigation Panel (Slim Left Strip)

Icon / Module	Action Trigger	Operational Purpose
Workspace Graph (LayoutGrid)	Left Click	Opens the interactive React Flow graph canvas. Shows relationships between suspect VPAs, phishing domains, phone numbers, and bank accounts.
Timeline View (Clock)	Left Click	Displays a chronological flow of audit records and discovery events tracking how threat intelligence was gathered over time.
Snapshots & Diff (GitCompare)	Left Click	Compares Snapshot #1 and Snapshot #2 side-by-side. Automatically calculates and displays what changed (Added/Removed/Modified entities).
Settings (Settings)	Left Click	Opens configuration panel to select AI model provider (Gemini/Ollama) and input your custom API keys (Gemini, HavelBeenPwned, etc.).
Help Manual (HelpCircle)	Left Click	Displays the onboard user manual containing quickstart guides, canvas mouse controls, and legal mandate descriptions.

2. Cases & Intake Control (Secondary Sidebar)

Action Button	Location	Operational Purpose
+ (Create Case)	Active Cases Header	Opens a manual configuration window to create a case by specifying a brand name, domain, or suspect username.
Case Selection Card	Active Cases List	Left-clicking loads the respective case graph, timelines, notes, and legal directives on the canvas.
Trash (Delete Case)	Case Card (Hover)	Triggers a cascading clean database delete removing all associated entities, edges, notes, transactions, and legal freeze documents.
Scraper Console	Secondary Sidebar	Displays real-time logs indicating scanning status, domain registration ages, and active database transactions.

3. Graph Canvas & HUD Controls (Top & Bottom Canvas)

Action Button	Location	Operational Purpose
+ Launch OSINT Scan	Top HUD Panel	Triggers deterministic zero-trust collectors (DNS lookup, WHOIS checks, SSL transparency logs, HIBP leak logs, and social cascades) on the target.
+ Add Entity	Top HUD Panel	Opens a modal to manually insert custom entities (e.g. standardizing new bank accounts, IP addresses, or phone numbers) to the canvas.
AI Assistant (Sparkles)	Top HUD Panel (Right)	Expands the collapsible AI panel. Submits SQLite graph topology into Google Gemini to generate grounded, hallucination-free summaries.
Node Inspector (Info)	Top HUD Panel (Right)	Toggles the detail inspector drawer showing evidence levels (CONFIRMED, OBSERVED, INFERRED) and transaction lists.

4. Inspector Drawer Tabs (Right Sidebar)

Tab / Button	Location	Operational Purpose
Details / Node Info	Inspector Tab 1	Displays metadata, timestamps, and geolocation profiles for the selected entity.
Relationships	Inspector Tab 2	Standardizes the connection of new edge relations (e.g., VPA requests_payment_to a Bank Account) with custom confidence scores.
Legal Directives	Inspector Tab 3	Displays pre-drafted Section 106 BNSS Bank Debit Freeze Notices mapped to BNS 2023 offenses for law enforcement.
Evidence Ledger	Inspector Tab 4	Shows DPDP 2023 compliant audit ledger logs. Clicking Verify Ledger runs a cryptographic SHA-256 Merkle chain verification to detect database tampering.
Download Freeze Notice	Legal Tab (Button)	Exports the pre-filled court-admissible PDF Section 106 BNSS Freeze Notice directly to the local download folder.
Download Incident Report	Details Tab (Button)	Generates and exports a complete publication-ready AEGIS Forensic Incident & Cluster Dossier PDF containing all case notes and graphs.
